DETAILED ACTION

Claims 22-47 are pending in the present application.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted. The inventions drawn to any one of the nucleic acid sequences in the claims do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Applicant's claims are drawn to various nucleic acid products and methods related to the use of each of those products individually. For unity of invention to be proper the inventions must have a technical link, which define a contribution over the prior art. Claims are considered to have unity of invention if (a) a process is specially adapted to the manufacture of a product, (b) a product and a process of using said product, (c) a product, the manufacture of said product and its use, (d) a product and an apparatus or means specifically designed for its use, (e) a product, a process specially adapted for the manufacture of the product and an apparatus or means specifically designed for its use. See 37 C.F.R. 1.475. Each of the sequences fails to satisfy any of these scenarios such that they should be examined together.

Because this application contains claims directed to patentably distinct species of the claimed invention, the nucleotide sequences present throughout the claims are subject to a restriction requirement. Nucleotide sequences are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute independent and distinct inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequence is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq. Accordingly, in most cases, only one (1) independent and distinct nucleotide sequence will be examined in a single application without restriction.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Conclusion

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
